### **DETAILED ACTION**

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 113-117 and 119 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson et al (GB 2181458).

Johnson et al disclose a method to support a wafer on a susceptor (Fig 4), gas flow through the susceptor between regions above and below the susceptor (Fig 4) with passage having inlet at lower surface and outlet at upper surface, plurality of symmetrical support arms which extend radially outward and upward from upper section of a vertical shaft (81), spacers to hold wafer (16) and means of rotation of the susceptor about the central vertical axis of the shaft (Abstract). Further Johnson et al teach heating means using radiant heating and the support arms and shaft of a material transparent to radiant energy (Page 3 lines 99-101).

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 1763

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 118 is rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson et al (GB 2181458) in view of Hardy et al (US 5343012) or alternatively in view of Kazuo Fukazawa (JP 05013350).

Johnson et al is disclosed above.

Johnson et al do not disclose the gas passages in the susceptor to include horizontal channels.

It is obvious however that the horizontal orientation of gas passages helps distribute gas to outlets opening in the upper surface.

Hardy et al disclose gas passages in a susceptor, which include horizontal channel.

Kazuo Fukazawa similarly discloses horizontal sections of gas passages for the same reason (Fig 1, 3 and 5).

Therefore it would have been obvious for one of ordinary skill in the art at the time of invention to have horizontal sections of gas passages in order to distribute gas evenly at the upper surface.

### Response to Arguments

Applicant's arguments filed 9/28/2005 have been fully considered but they are not persuasive.

Rejections relying upon deBoer, deBoer et al in view of Harada and Perlov in view of Harada are removed in view of applicants arguments.

Application/Control Number: 10/642,799

Art Unit: 1763

Regarding Johnson et al applicant argues that the plurality of support arms (risers 81) do not extend radially outward and upward from an upper section of the vertical shaft. This argument is not understood since the support arms are related to the vertical shaft first laterally extended and then upwardly extended. This clearly reads on the claim.

#### Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ram N. Kackar whose telephone number is 571 272 1436. The examiner can normally be reached on M-F 8:00 A.M to 5:P.M.

Application/Control Number: 10/642,799 Page 5

Art Unit: 1763

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571 272 1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
